

Architectural Door Hardware

PROTECT THE DOOR & FRAME

Completed in 2021, Cortellucci Vaughan Hospital was written and Supplied by Ian Brown, AHC, Principal, at Upper Canada Specialty Hardware. Cortellucci Vaughan Hospital has over 340 beds, 1800 staff and is considered one of Canadas most high tech hospitals.

As in all hospital environments, door and frame protection can never be underestimated.

Recognizing the 24/7 nature of rigorous use and abuse, characteristic of this environment, Mr. Brown specified Gallery Specialty Hardware Door Protection. This approach includes door edge guards, CH953 continuous hinges GSH41N, frame guards, GSH50N and Armour plates, GSH90F. The combination of these products create a protective envelope around each door, thus protecting the doors in this hospital from wheel chairs, stretchers and crash carts. In the long run, this approach saves the hospital tens of thousands of dollars in annual maintenance costs replacing and repairing damaged doors and frames.
